

Glasgow Coma Scale and Neuro Trend

Trend eye, verbal, and motor responses using the same stimulus and documentation method.

Three domains - Eye opening: 1-4. - Verbal response: 1-5. - Motor response: 1-6. - Total score: 3-15, but component scores tell more.	Document clearly - Record E, V, and M components, total, time, and stimulus. - Note intubation, sedation, language, hearing, paralysis, and baseline limits. - Avoid vague terms such as "stable neuro."
Escalate change - A declining trend, new pupil difference, new weakness, seizure, or acute behavior change needs prompt assessment and escalation. - Protect airway and injury risk. - Check glucose and reversible factors per protocol.
